

LABWARE®

LabWare Pharma/Biopharma Solution

LabWare for the Pharma/Biopharma Industry

LabWare's solution for the Pharmaceutical and Biopharmaceutical industries has been developed through long term partnerships with over 2500 active customers to deliver the #1 LIMS/ELN Platform in the world, and the most functionally rich, flexible, and robust laboratory automation platform available.

LabWare's Pharmaceutical Solution delivers extensive capability out of the box, enabling companies to rapidly get up and running with functionality that is based on industry best practices, proven with great success, across both large and small laboratory implementations.

In addition, the flexibility of LabWare's solution enables company and laboratory specific workflows and processes to be supported through system configuration facilitated by our trained and industry experienced consultants or through developing your own expertise. This ensures operational efficiency, quality process controls, regulatory compliance and reliable data are all enhanced for your organization.

Customers leverage the following to realize superior value from their investment in a LabWare system:

- Comprehensive out of the box capabilities and master data loading tools reduce software implementation timelines.
- Extensive integration capabilities to Instruments, IoT interfacing, other enterprise software and internal systems helps maximize productivity.
- LabWare's unique in-place upgrade capability provides a flexible laboratory software solution that evolves with your business and stays current with advances in information technology.
- Configurable workflows increase efficiency, reduce operational costs, and improves the turnaround times for delivery of complete and accurate results.
- Built-in analytics, configurable metrics and comprehensive dashboards ensure efficiencies are delivered and maintained.

All of this helps customers achieve their vision of the digital lab of the future, through process and laboratory automation designed to create efficiencies and maximize data utilization.

LabWare's Pharmaceutical Solution can help ensure compliance, accurate results, and efficient throughput. The #1 LIMS in the world, powered by 30 years of automating laboratory workflows, LabWare has pre-configured best practice solutions inspired by thousands of top laboratories.

- Aligns with the latest regulatory data integrity guidelines
- Industry best practice GMP workflows available out of the box
- Facilitates rapid digitalization of your lab processes ensuring early ROI
- Is accessible anywhere, on any device

Streamlining Lab Operations

Sample Management

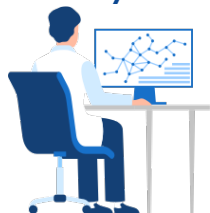

Sample management provides powerful schedulers designed to automate sample logging as well as manual options for every eventuality. Single and multiple samples can be logged in a variety of styles, allowing a lab to optimize their process. Once logged, LabWare's chain of custody automatically and continuously updates the status and location of the samples throughout the lifecycle.

Lot Management and Release

Track the status of all manufactured batches and raw materials as well as where testing is occurring, from submission through to reporting. Lot management includes built-in functionality for laboratory KPI monitoring, data review, lot release, skip lot testing as well as automatic report generation and approval for each lot. The LabWare Pharmaceutical Solution organizes the tracking, testing, and reporting of manufactured batches and raw materials to maximize laboratory efficiency.

Stability Study Management

Highly flexible Stability Study Management capabilities coordinate and manage all related work in an entire study with one or many protocols. Through intuitive dashboards comprehensive functionality is provided, including inventory and storage chamber management, stability pulls, labelling, work assignment, sample chain of custody, results entry, time point reviews, and stability study reporting.

Environmental Monitoring

Environmental Monitoring provides flexible and reliable controls for managing sample collection, incubation tracking, and testing. EM data visualization is straight-forward with robust reports, flexible dashboards, and extensive searching capabilities. EM Schedules can be programmed into the system to automatically log samples and prompt regular point monitoring, ensuring all the required samples are taken and tested appropriately. Samples can also be taken manually to facilitate unscheduled sampling or personnel monitoring.

Workflows and Dashboards

Configurable dashboards are used to display important process measures in a variety of graphical and tabular formats. These dashboards can be personalized to fit the needs of any user role including laboratory managers, analysts, quality control personnel, etc. Separate dashboards are available for daily laboratory operations and Key Performance Indicator monitoring, where a Lab Team, Manager or Departmental leader can create and monitor KPI's specific to their organizational goals.

Analytics and Data Reporting

LabWare has a long track record of helping customers get the most from their data. Dynamic reporting capabilities enabling the compilation of targeted data sets, the generation of formal reports, graphing, trending, and statistical evaluation of data at the point of generation ensures our customers achieve more with their data.

Your System Your Choice

A LabWare system can be delivered in the way that best suits your organization:

Your Cloud of Choice

Whatever cloud provider your company has settled on, LabWare can work with you and your provider to host LabWare in your cloud, lowering integration complexities and ensuring you get the most value from your cloud, be it Azure, AWS or any other provider.

Managed for You

If you don't have your own cloud, we can help design and build a comprehensive cloud-based solution for your business and then manage and maintain the entire application stack for you.

LabWare Pre-configured and managed SaaS Solutions

LabWare offers a SaaS delivered subscription solution hosted by LabWare with built-in upgrades and system management. It brings the power of the LabWare Pharmaceutical Solution configured for QA/QC laboratories at an affordable price.

On-Site

More and more customers prefer a cloud environment that is hosted for them, but if you require your LabWare implementation hosted within your infrastructure we have extensive experience ensuring on-site implementations are optimized.

LabWare Professional Services

Configuration and validation performed by LabWare Professional Services is world class. No other service provider has the depth of knowledge or training in our latest offerings. LabWare professional services will ensure your implementation meets your needs and fits your processes and can support your ongoing need for change through smart system enhancements and upgrades.

Daily System Support

LabWare Customer Success Management is a monthly subscription service that will remove the burden of day-to-day system management for you. This LabWare service can manage activities such as user access, creating or modifying products and specifications or adding new analyses. You decide how much help you need, and we'll customize a service for you, be it a few hours a month or full time staffing, this cost efficient resourcing enables you to focus on your business rather than managing your systems.

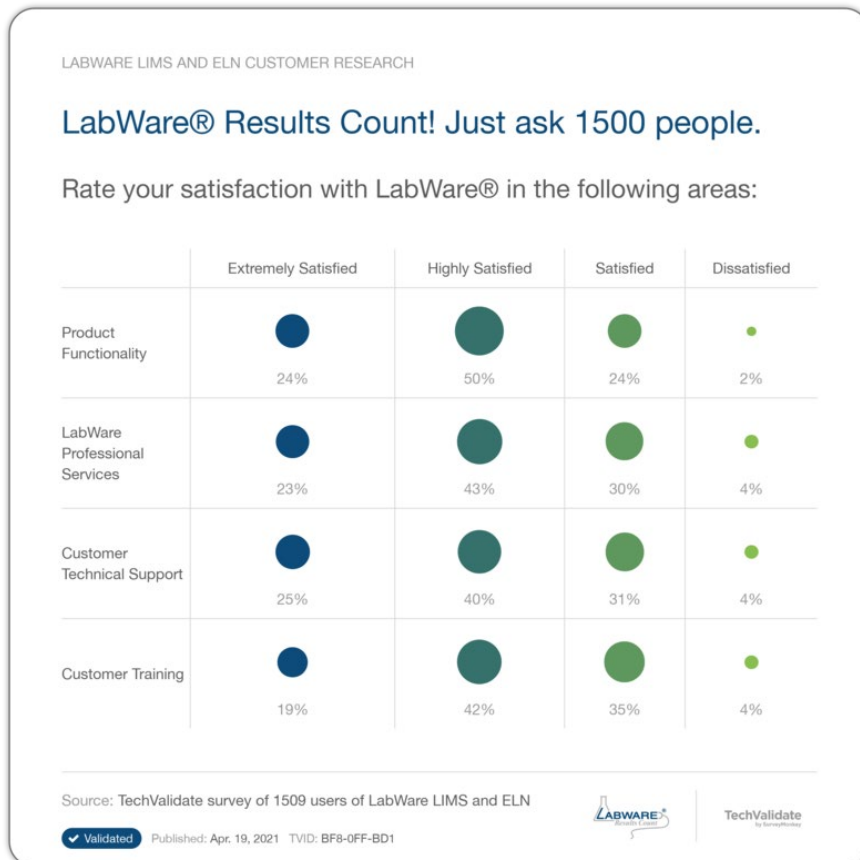

Broad and Deep Product Features

The graphic below highlights some of the key modules included with the LabWare Pharmaceutical Solution and highlights others that can be added based on specific needs, ensuring every customer gets the exact system that they need.

Results Count

Our tagline is Results Count. By paying close attention to customer success and satisfaction, LabWare has become the global leader in laboratory automation software.
